CHOICE information sheet for 5-7 year olds

What is a study?

A study is what you do when you want to learn about something or find out something new.

This study is called CHOICE and we are looking at finding new ways to help keep your teeth healthy.

You have been asked to join this study as your dentist has noticed that you have a bit of tooth decay.

What will happen to me if I join in?

You will have your normal check up with your dentist where they will look at your teeth to see if you can take part in the study.

Your mum or dad or primary caregiver may then have a short meeting with one of our nurses and they might be asked to try some new things to help make your teeth grow big and strong.

The study lasts 2 years and your parent/caregiver will be asked to answer some questionnaires over those 2 years.

At the end of the 2 years, a dentist from the study will look at your teeth again - this will be just like a normal check-up.

Your dentist will also give the study team some information about your teeth.

Do I have to join in the study?

No – you don't.

If you don't want to join in nobody will mind.

If you change your mind, that's okay as well.

What if I feel upset about the study?

If you feel upset about anything to do with the study, tell your parent/primary caregiver.

What if I have got some questions about the study?

Your parent/primary caregiver has been given lots of information and they can probably help.

If you still have some questions, they can talk to one of the nurses or dentists doing the study.

And do not worry, any information about you taking part in this study will not be shared with anyone else!
